

High Definition Free-Form Digital Rx Lenses.

- Everyone is different: Customized Digital lenses that are fully compensated provide the best vision possible.
- Not All 20/20 Vision is the Same.
- True 20/20 vision must be crisp and clear vision anytime anywhere!
- A patient's optical requirements are as individual as their own fingerprint.
- High Definition Free-Form Digital Rx Lenses provide clearer, sharper and more vivid vision.
- The evolution of Free-Form Digital Technology has made what was before impossible now possible!
- Available in SV, Bifocal and Pal.
- Lens Materials: Poly, High Index (1.6 & 1.67), Transitions/Photo Fusion, and Polarized Sunglasses.
- Estimated 164 million patients in the U.S., 18+ years of age requiring vision correction, also have levels of higher order aberrations that are clinically pronounced.
- These lenses correct the vision distortions of Halos, Comet tails, and Starburst.
∞Visual acuity and Nighttime vision distortion:

- Low contrast
- Double images
- Lack of color contrast

In short, High Definition Free-Form Digital Rx Lenses protect against:

- Nighttime vision**
- Low contrast**
- Double images**
- Lack of color contrast**
